

Phally,
CEO and Founder of VP.Start

**Why is Innovation through
Technology a core pillar of
a greenable future?**

**Why is it essential to build
a greenable future as a
component of the **SIMA**
sustainability system?**

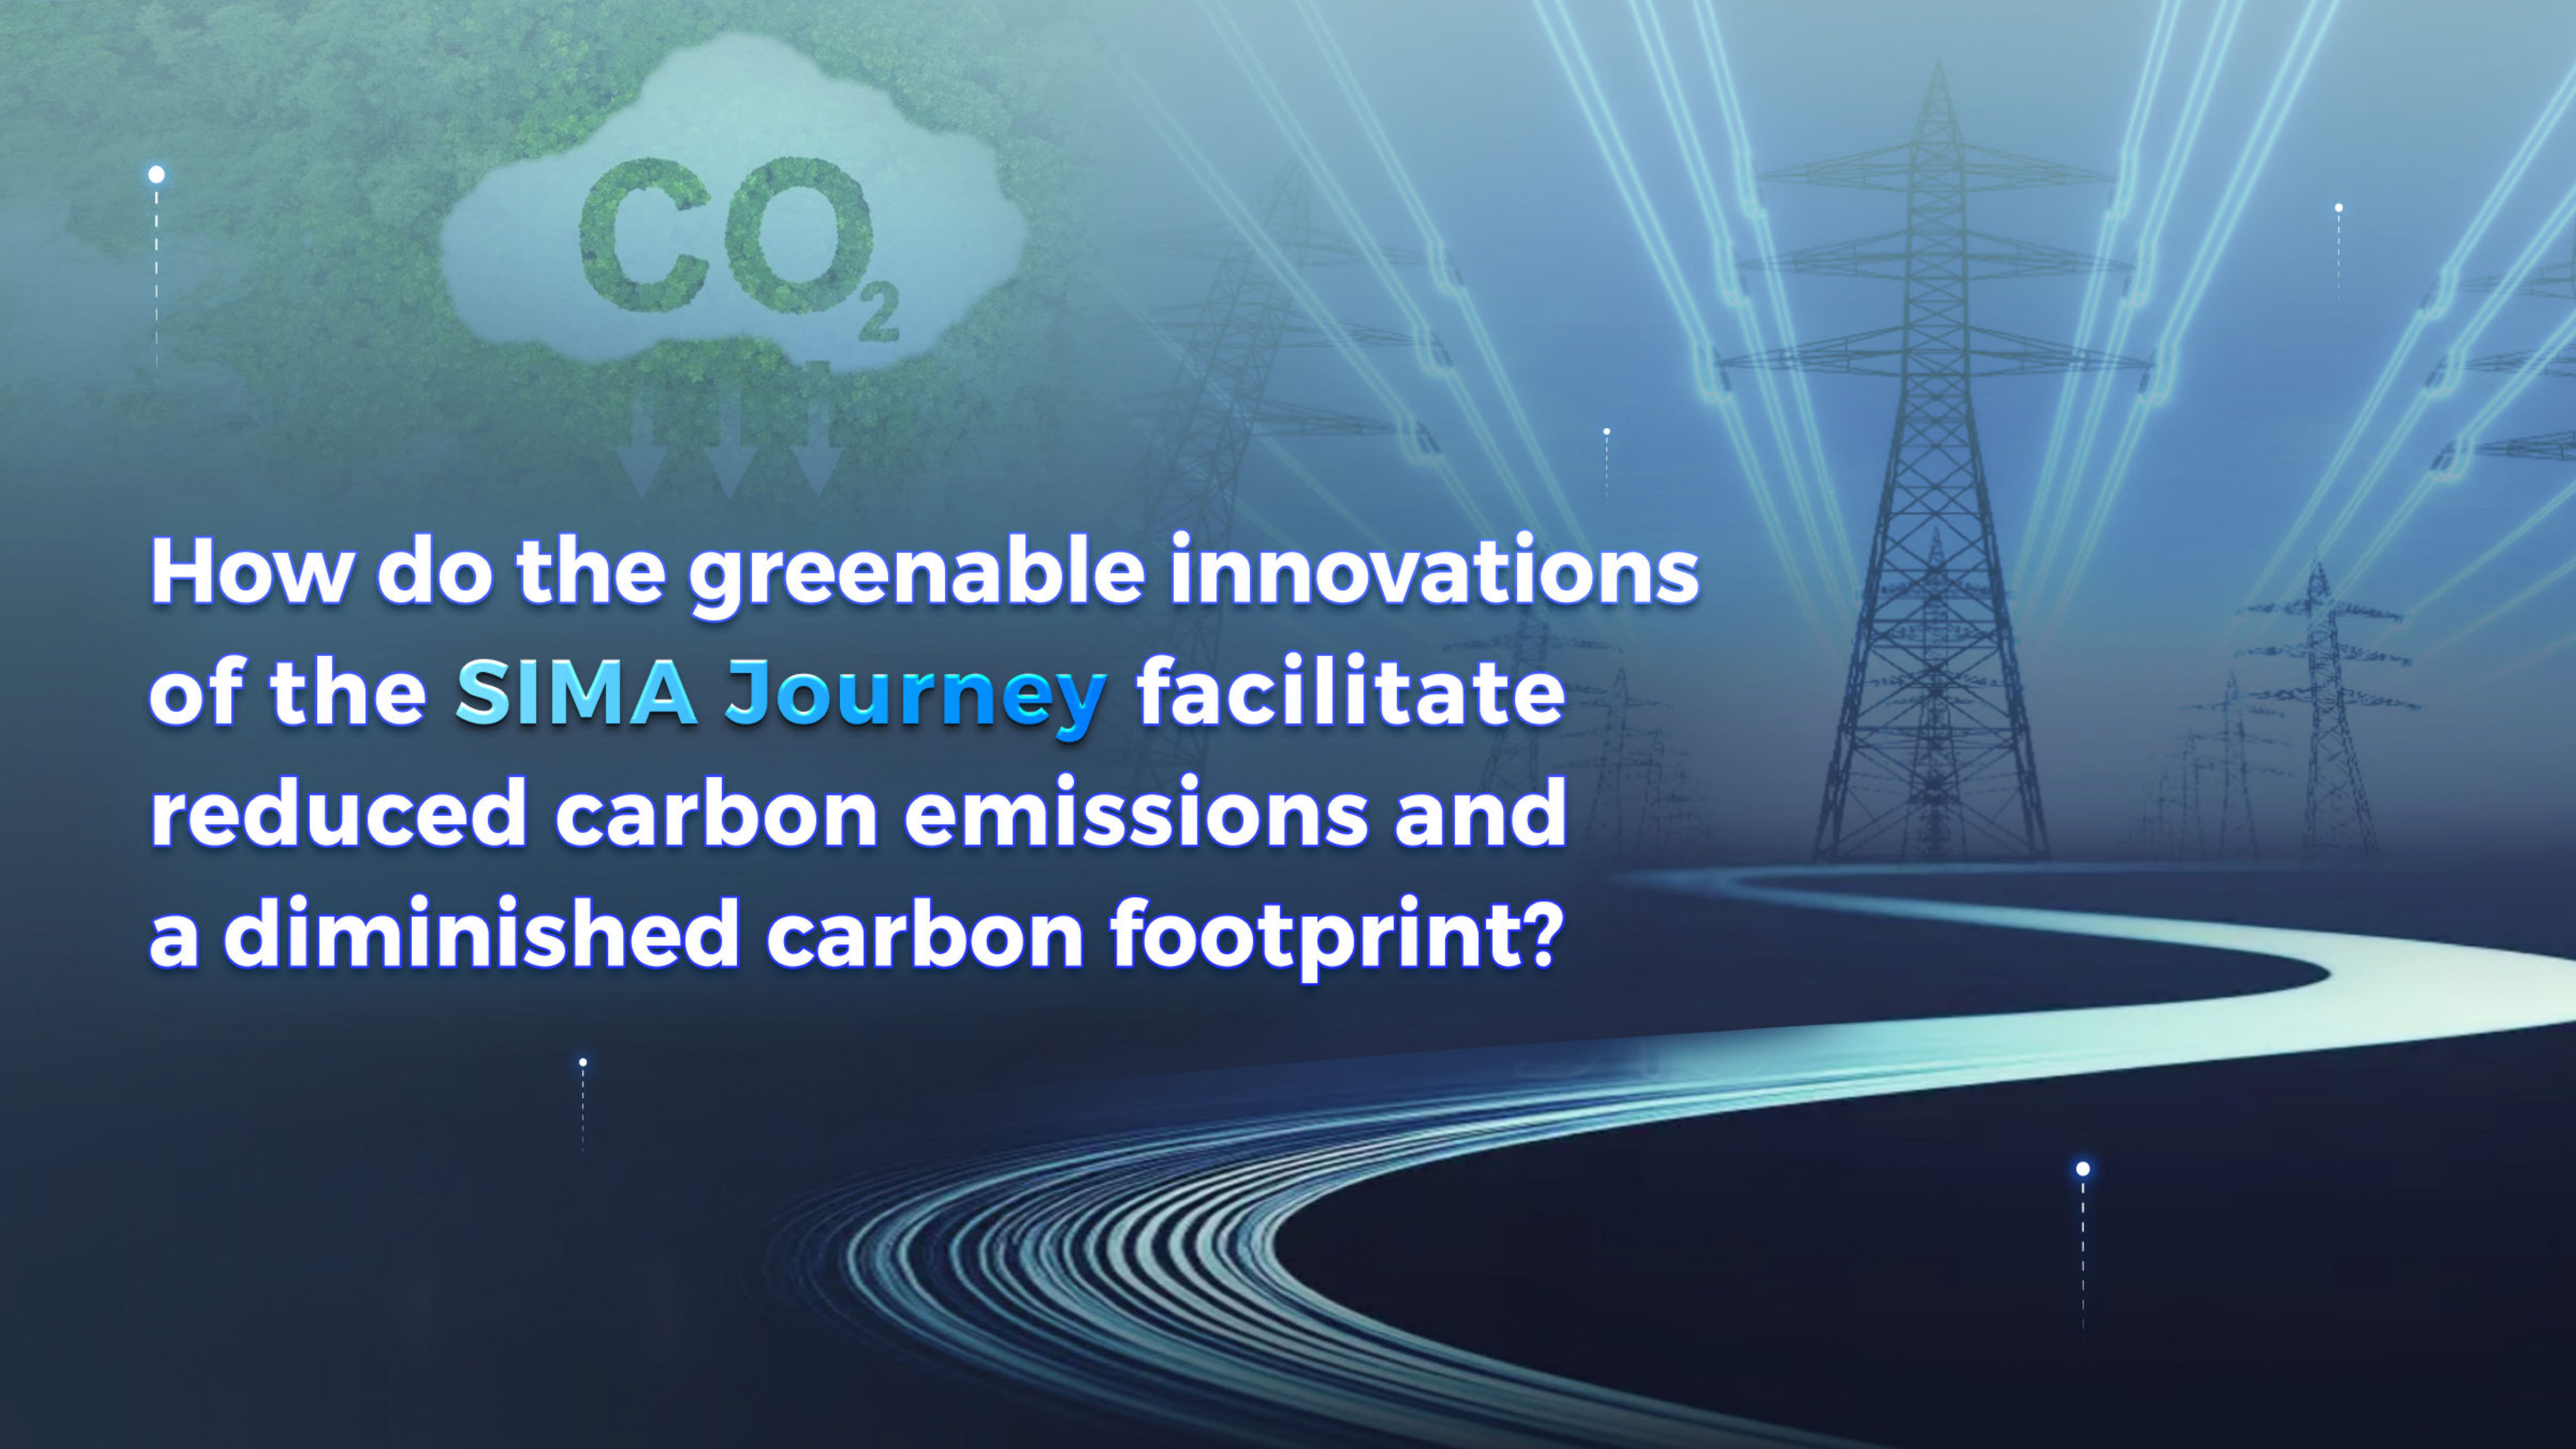

**Why is the conventional grid
inadequate and insufficient
in reducing waste and
environmental damage?**

Why do we consider the SIMA Smart Grid and the 5 missions of VP.Start to be green ecosolutions?

The background is a dark blue gradient. In the top left, there is a green, cloud-like shape containing the text 'CO2' in a green, textured font. Below this, three green arrows point downwards. On the right side, there are several high-voltage power line towers with glowing blue and white energy arcs emanating from them. At the bottom, a glowing, swirling path of light leads from the foreground towards the right.

CO₂

**How do the greenable innovations
of the **SIMA Journey** facilitate
reduced carbon emissions and
a diminished carbon footprint?**

How does the SIMA Journey lead us to a more sustainably green future for our country, our ASEAN region and our world?

The

SMAP
